About this initial sketch

So this would be a “recreation” of my current CV. (in HTML, of course). Since deep inside I’m a designer and I really enjoy designing stuff I’ll try to play as much as possible with CSS to get used to it aswell. I would also like to add more visual stuff (frames, shading..) and some javascript too (maybe a pop-up or something like that to add a “contact” box? or maybe to accentuate certain elements (zoom and highlighting). I’ll try to make some more research and draw a second sketch, but if it gets too complicated I’ll end doing something similar to this one.

For now I’ll need to pay attention to:

- padding and how to correctly position elements
- + make it look nice everywhere (since I want everything centered in the middle of the page)
- creating lines? / separators
- “sharing space” (text on top of images..)
